NIS CHAPTER IX MEMO NO. 29

DATE 5 September 1956

MEMORANDUM FOR: NIS Chapter IX Contributors

SUBJECT: Treatment of Diacritical Marks Used in Turkish

The numerous diacritical markings appearing in Turkish present a problem in the preparation of contributions to the Chapter IX for NIS 27, Turkey, which is on the schedule for the current year. Most of these markings can be indicated either by hand or by the special keys with which some typewriters are equipped, but the undotted "i" is in a special category. If material is being prepared in ditto, the dot can be removed from the master copy with little effort. For all contributors who do not use the ditto method of reproduction, however, it is suggested that the omission of the dot over the "i" be indicated by the standard delete mark (i.e., ~~i~~).

~~CONFIDENTIAL~~
